

# Quick Reference Guide

## Initiating a Patient Call with TigerTouch+ on Android

Using **TigerTouch+**, calling a patient via Mobile can be initiated using your organization's Patient Network. On Android, calls are initiated by the clinician using the patient contact list or from within a patient conversation.

To initiate a call with a patient or patient contact, tap on the phone icon at the top right of screen in a patient conversation, or press and hold on the patient tab in your patient contact list and tap on call.

The conversation will begin via secure portal on the web browser of the patient's device.
