

8 Hidden Ways to Unlock Massive EHR Value

Connect the Entire Health System

Different facilities with different EHRs? No problem. Clinical Communication and Collaboration systems live outside the EHR but can still access key data.

Communicate During EHR Outages

CC&Cs keep communication flowing when the power goes out, or the EHR goes down.

Patient Record

Need to discuss something in private with a care team member? Breathe easy knowing that your messages will remain discreet and not be added to the patient record.

Preserve System Interoperability

Integrate seamlessly with nearly any EHR or 3rd-Party System for true healthcare interoperability.

Make Your Data Actionable

Unlike EHRs, CC&C platforms are known for being “systems of action”, where notifications and alerts are optimized for easy mobile access and quick response.

Use Role-based Communications

Quickly locate and manage the right specialist or on-call staff member by their role – no name required.

Assemble Care Teams on the Fly

Rapidly assemble and manage care teams on a flexible, centralized clinical communication platform.

Integrate Paging & Call Centers

Still using pagers? Replace your pagers (and your '82 Camaro) with a 21st century healthcare messaging app.
